WORK EXPERIENCE

TMA Solutions: 2018 - Present

CDN Performance Framework:

Role: **Backend Developer**

Developer:

- CDN is a Content Delivery Network which provides large data throughout internet with vast incoming requests from everywhere. This framework ensure the CDN servers not only satisfy all client requests but also work in its best performance.

Duties:

- Build client requests simulator - simulate incoming client requests;
- Visualize result to Grafana.
- Build Test Cases;

Technologies:

- Python, Shell Script;
- Source Control: Gitlab.

Lightweight Dispatcher Terminal:

Role: **Backend Developer**

Developer:

- Dispatch console is a UWP application which provides the vital link between dispatchers and field personnel, helping to coordinate field response and ensure the safety of personnel. Dispatch consoles can also access the radio system through an IP network, making it possible to operate through a local network or from anywhere in the world.

Duties:

- Build server/client to send/receive messages/data packages.
- Build interface for 3-parties library.
- Build transmitter controller to handle client-server connection status.

- Build MVVM architectural pattern for the project.
- Build unit test cases;
- Record/demo the application for customers.

Technologies:

- C#.
- UWP.
- MySQL.
- Source Control: Gitlab.

Medical Project Management:

Role: **Backend Developer**

Developer:

- Medical Project Management provides a website to help store, manage medical project from where the project take place, when it start, who in charge,... This website provides a detail information about medical project and helps controlling the project process with little effort.

Duties:

- Build RESTful API for project, project's Site;
- Build unit test.

Technologies:

- C#.
- .NET Core 2.2.
- MySQL.
- Source Control: Gitlab
