Education background

Can Tho University with Software Engineer Major.

● I graduated on 9/2015.

● I have studied a course about Java, Android at my University

Working experience: 2 years

● Work at BSP company (http://www.bsp.vn/) as an android
developer

● Work at Nhật Cường Software company (http://www.ncsoftware.net/) as
an android
developer

Project:

Mini Game: (main devloper, 1 devloper, about 2 month)

https://play.google.com/store/apps/details?id=bsp.mathschicken&hl=vi

https://play.google.com/store/apps/details?id=bsp.minigame&hl=vi

Developed on the available designs

ICU Application: (2 developers, 4 month)

It is a social network. Your application can find around here, you can view
user information (fullname, old, zodiac, hobby…).Use google map find
nearby friend.

In this project, I have used Picasso (a image downloading and
caching library). I use Retrofit 2 call API.

My responsibilities are : implement login function using facebook, google
sdk, profile's image slider using viewpager and picasso to loading image,
find out nearly user by using gps to get current location ….

SmartApp: (3 developers, 5 month)

Is a smart app. You can login with avaiable facebook account, you can
use it to call a taxi, post Ad You can see Ad detail(slide image use
viewpager, call taxi, ..);

My responsibilities are : implement Ads screen , get ads list from api server and viewing ads details, get phone list from api server and make call...

WrapMobil: (3 developer, 3 month)

Main feature is showing ads in car like taxi. In this application i have implement register, login, login with facebook, check testcases. Add database from cvs file, open it. I query the data to display. Showing car list. In car's details, you can see image car, slide and zoom it…

Epupil: (3 developers, 2 month)

The main feature is communication bettween The Teacher and Student's Parents about Learning Process...

My responsibilities are maintenance and implement get notifications from api server by using firebase sdk (real time data change)

Eschool: (3 developers, 1 month)

The main feature is help The Teacher to management students such as The teacher can attendance student.

My responsibilities are implement attendance fuction : getting student information update student attendance every day and sending to api server...

Eheygo Food (main developer, 1 developer, 1 month):

https://play.google.com/store/apps/details?id=vn.com.hagl.eheygofood
My responsibilities are implement showing vegetable available on stock to user, scan QR code the identify get details information of product, ….

Karaoke application:(my product, main developer,1 developer, 1 week)

Main feature: use local data (SQLite) to query song, search song by keyword to get song code, favorites song list.(currently development)

Skills:

● Have good experience in working with GUI on Android for multiple screen.

● Can work well with Android SDK, Android Studio

● Can use version control like SVN, GIT SourceTree.

● Have knowledge in OOP.

● Having responsibility and ability to work under high pressure

English:

Can read technical documents, write report.

Other:

● Love teamwork and other team activities.

- Love researching new things, learning new things and apply them to reality.
- Outgoing, energetic.
- Reading books.

Goals:

- Have a long term job to stick with.
- Become a professional software engineering.
- Develop myself more and more.
